

$$\mathcal{L} = \frac{1}{|\mathcal{R}|} \sum_{\mathbf{r} \in \mathcal{R}} |\hat{p}_s(\mathbf{r}) - p^*(\mathbf{r})| + \lambda \cdot \mathcal{L}_{\text{EDS}}$$

$$p^*(\mathbf{r}) \longleftrightarrow \hat{p}_s(\mathbf{r})$$

PTE Forward Model

$$\hat{p}_s(\mathbf{r}) = -\ln \left(\sum_{i=1}^N \eta(E_i) \cdot [e^{-\hat{p}_i(\mathbf{r})} + S_i(\mathbf{r})] \right)$$

Direct Transmission

$$L_{\mu} = \exp \left(- \int_r \mu_E dx \right)$$

HG phase function

$$g \approx 0.9$$

In-Scatter

$$L_{is} = \Sigma \sigma_s \cdot L_x \cdot p_{HG}(g) \cdot \Delta x$$
